

Quality Care Through Innovative Technology

Patient to Staff

Staff to Staff

Staff to Patient

Total  
Connectivity

## The Benefits

### Connectivity

The **igeacom600/601/700/701** doesn't just provide connectivity – it provides “real time” connectivity. Patients can reach staff, immediately and at any time. Staff can easily reach each other and respond to patients’ needs, instantly and effectively, from anywhere in the facility.

### Productivity

Quality of care is not the only thing that improves with the **apolo ENS**. So can the bottom line. Staff productivity increases with the connectivity. Single source installation and administration saves time and money.

Software applications enable detailed patient activity plus automatic reporting on calls and response times to provide total accountability for staff. You can also create staffing models that reflect actual patient needs and call activity cycles.

### apolo ENS

The name **apolo ENS** originates in greek mythology and represents order, harmony, and community. In an environment where response times can be a matter of life and death, real time connectivity is the biggest benefit to the level of care.

Patient to staff

Staff to staff

Staff to patient.

Total Connectivity

The IgeaCare solution provides unprecedented dual redundancy and 5 nines reliability. The requirements of an individual facility will determine the scalability and scope of the total solution. Patient and administrative telephone services and emergency event notification co-exist on a unified platform and keep everyone within a facility connected at all times.

Peripherals are seamlessly integrated and enhance connectivity. Wired and wireless pull stations can be installed in bathrooms and/or care areas and provide instant notification. Additional call points can be easily added to the IgeaCare solution.

The igeacom 600/700 series patient unit, call cord, hardwired or wireless pulls cords, and dome light work together to provide total in room monitoring. The igeacom patient unit features include: staff assist, code blue, nurse in / nurse out, cancellation at the point of origin, cord out supervision, pillow speaker ready, Hill-Rom SideCom® compatibility, traditional & specialty call cord capabilities, bed exit readiness, connectivity to hard wired or wireless pull stations.

Built-in individual call point escalation with programmable response parameters, call point priority and flexible dome light schemes ensure that no call goes unanswered. Integrated station battery back-up further enables constant connectivity. Group paging enabled units (igeacom 601/701) eliminate the need for independent overhead paging systems.

The apolo ENS GUI interface allows ease of communication with standard analog, digital and/or IP telephony desk sets. It provides intuitive operation and eliminates the need for specialized training. The system provides real-time event notification and acknowledgement on any visual display. The console can also allow for priority audible tone and automated speech notification.

This easy to use drag and drop interface enables automated or on-the-fly assignments. Event notifications can even be sent to any wireless communication device. Additional integration capabilities include: HL7 Gateway; AD&D; Enhanced reporting and recording QOS portal; Staff and Asset Tracking; Patient Wandering; Medical Equipment; Security and Fire Alarm Equipment.
